Now is the time
to take years off
YOUR appearance

It's easy with
Smartlifting

Are you ready
to turn back the clock?

Smartlifting™

5 Reasons to ask for Smartlifting by name

It's Less Invasive

Smartlifting does not carry the risks and expense associated with a more invasive facelift

It's Faster

Your Smartlifting treatment will be completed in about an hour and you'll be back to normal activities in a few days

It's Long Lasting

You'll benefit from a facelifting procedure for several years, making Smartlifting a cost effective alternative to the many other facial rejuvenation techniques available today

It's Safer

By incorporating the Smartlipo laser, bleeding and bruising is reduced

It's Effective

Smartlipo laser and mini-lift techniques are supported by more than 8 years of clinical studies

FAQs

What is Smartlifting?

Smartlifting is a new technique in facial rejuvenation and is a more gentle approach to the facelift procedure. Cynosure's SmartLipo laser allows the surgeon to smoothly separate the layer between the skin and facial muscles without extensive cutting. The laser helps to seal off blood vessels before the lifting portions of the facelift operation begin resulting in less bruising. The laser precisely delivers thousands of tiny laser pulses into the layer separating the skin from the deeper tissues of the face. Each pulse heats the tissue which allows a separation to occur between the two layers. These zones of heating coagulate the tissue and stimulate collagen production to tighten tissue. Sutures are then used to elevate the jowls through a small incision.

What are the advantages of Smartlifting with Smartlipo compared to other face lifting techniques?

When compared to traditional face lifts, Smartlifting has fewer costs, side effects, and a quicker recovery period. A Smartlifting procedure typically takes just over an hour and can be done with local anesthesia or mild sedation. When Smartlipo is used you experience much less bruising. Smartlifting also causes tissue tightening* and collagen stimulation, effects which are not possible with traditional facelift techniques.

Is there a recovery period?

Smartlifting is a minimally invasive procedure and some bruising and trauma will occur. You will be able to return to work in 3 to 4 days. You will notice a more lifted look immediately after your procedure and optimum results can be seen at approximately 3 months following treatment, as a natural process called collagenesis results in new, more organized collagen. This collagen plumps the skin and results in incredibly smooth looking skin.

How long does Smartlifting last?

Facelift results can be long lasting and beneficial for several years.

How do I know Smartlifting is right for me?

The best candidates for Smartlifting are men and women looking for a more youthful appearance and who want to eliminate skin laxity and elongation of the face that occurs during facial aging. A consultation with a Smartlifting physician can provide you with the best information.

"I have higher cheeks now and no more jowls or turkey neck. I feel like I shed 10 years with only a few days of downtime."

- Patty S.

Smartlifting results.
